

Dear Hiring Manager,

I am writing to express my interest in the field of RAMS, especially in the organizing and analysis of field data, the determining of part reliabilities and its role in the design process, and the development of safety procedures. As an industrial engineer, I realize the importance of RAMS in ensuring the smooth implementation of process and part changes, and how RAMS is a tool that can reap unimaginable benefits if utilized correctly. This is the root of my interest in the field.

I am looking for an opportunity to close the gap between my current level of experience and that of professionals currently in the field of RAMS. I have an aptitude for computer programming and data analytics in C++ and SAS (as seen in my relevant courses list on my CV) which I believe can be beneficial in this field. I also have experience with continuous improvement implementation in multiple organizations (Pladis and Bupa Arabia referred to in CV). Combining my data driven mindset from academics along with the rich experience and study of continuous improvement methodologies, this is a field I can shine in.

I hope to be able to add value to your company, and gain experience in a field I am passionate about. Thank you for your consideration.

Sincerely,
Hamza Siraj
